

Thank you so much for making this week's seminars a huge success! We had slightly over 100 people in attendance representing the Engineering community, municipalities, private water systems, water system contractors, governmental agencies and industrial end users. I believe the material presented by both Danfoss and Grundfos was extremely well received and should assist the individuals in understanding the benefits of optimizing their pump systems and the huge potential cost savings with using Variable Frequency Drives on pumps. Special thanks go to Jeff and Roger for their excellent presentations and to the RWAA for helping to spread the word to its membership base.

We would like to do this presentation again at some point in the future. It's nice to be able to work with an organization that is very pro-education oriented.

Sincerely,

Jim Sebbens
